

MINEASK

MVP Consultant Recruitment & Validation Campaign

A precision-account strategy to recruit Ghanaian mining consultancies and law firms as MVP design partners, validate the Ground Readiness Report against real-world engagements, and build the foundation for a consultant-first go-to-market engine

Smart Innovations Ghana · July2026 · Internal Use Only

Campaign Type	MVP Validation — No commercial activity
Duration	2 to 4 weeks
Channels	LinkedIn · Email · Google Forms
Target Testers	20 to 50 mining consultants and law firms
Campaign Goal	Collect structured product feedback from real engagements, validate report accuracy, and produce 3 to 5 reference able firms for the Growth phase

Executive Summary

MineAsk's MVP Consultant Recruitment Campaign is a carefully designed initiative to validate its *Ground Readiness Report*, a structured intelligence report for Ghana's mining sector. The campaign seeks to recruit ten to fifteen Ghanaian mining consultancies and law firms as design partners, granting them free access to the platform in exchange for feedback, corrections, and real-world validation of outputs. Unlike a sales or fundraising effort, this campaign avoids pricing conversations or subscription commitments, focusing solely on product validation with professionals who already produce desk studies and pre-feasibility assessments for mining investors.

The campaign deliberately narrows its scope to a finite market of thirty to fifty firms concentrated in Accra and Kumasi. Rather than pursuing broad awareness, it emphasizes deep, personalized engagement with named firms whose expertise and eventual advocacy will determine whether MineAsk achieves product-market fit. Running in parallel with a 2- 4 weeks go-to-market plan, this effort feeds validated content, reference able partners, and credibility into the broader commercialization strategy. By prioritizing relevance and tailored outreach, MineAsk positions itself to secure meaningful validation and establish trust within Ghana's mining consultancy ecosystem.

Campaign period: 2 to 4 weeks. All outreach through LinkedIn, email, and Google Forms only.

SECTION 01: CAMPAIGN OBJECTIVES

This campaign has one primary objective and four supporting objectives. All objectives are measurable and must be evaluated at the close of the three-month campaign period.

Primary Objective

The campaign aims to recruit 20 to 50 Ghanaian mining consultancies and law firms as MVP design partners, giving them free access to the *Ground Readiness Report* platform and collecting structured feedback from at least eight active users who apply it to real client engagements. By the end of the campaign, MineAsk must secure 3 to 5 reference able firms that have used the platform in practice, provided feedback, and agreed to be cited by name in growth-phase sales conversations.

Supporting Objectives

Objective	Measure of Success
Lawyer Validation Partnership	Secure at least one sign-ups via the Google Form from a mining law practice based in Accra within the first 7 days of launch.
Platform and Regulatory Roadmap Explorer Launch	At least 80% of sign-ups log in and use at least one module of the platform, converting at least 10% into full-report trial users during the test period.
Feedback Completion	Collect at least 20 community-level data corrections submitted by consultant users during the campaign, establishing the feedback loop that continuously improves platform data.
Audience Coverage	Feedback collected from at least 5 live report demonstrations so that no single segment dominates the findings.

SECTION 02: TARGET AUDIENCE

MineAsk's MVP audience is made up of professionals who encounter the platform's core problem in their actual work: the slow, manual, and source-unattributed assembly of desk studies and pre-feasibility assessments for Ghanaian mining assets. Partners are not recruited because they are interested in technology platforms. They are recruited because they feel the pain the platform solves every time they open a new client engagement and begin the desk study phase that precedes all fieldwork.

Testers are sourced across Ghana. Ghanaian mining consultancies and law firms who work on Ghana mining, ESG, or investment are equally valid testers and often easier to reach via LinkedIn.

Primary Segments

These segments represent MineAsk's core paying user base at launch. They are recruited first and prioritised throughout the campaign. Every outreach message, demo, and feedback interaction is designed around their specific workflow and deliverable requirements.

Segment	Job Titles to Target	Why They Matter
Mining Consultant (Firm Principal / Senior Consultant)	Senior Mining Consultant, Principal Consultant, Managing Director, Head of Advisory, Director of Mining Services	They manage 3 to 8 client engagements per quarter, each requiring a desk study as the first deliverable. The desk study is the lowest-margin, highest-effort phase of every engagement. They personally feel the pain of manually assembling regulatory, land, logistics, and environmental data across fragmented sources.
ESG & Compliance Professionals	ESG Officer, ESG Analyst, Sustainability Manager, Compliance Officer, Environmental Analyst	They need mine-level ESG data for West Africa that does not exist in any accessible format. High engagement likely. Strong opinions on data completeness.
Mining Company Professionals	Exploration Manager, Concession Manager, Land Manager, Geological Data Manager	They work daily with GIS data, concession records, and regulatory filings. They will stress-test the most technical modules and notice data inaccuracies quickly.
Mining Lawyer (Partner / Senior Associate)	Mining Law Partner, Senior Associate (Mining Practice), Head of Natural Resources, Counsel (Mining & Minerals)	They handle title registration, regulatory compliance, land acquisition, and community negotiation. They are the most valuable validation partners for the regulatory rules engine because they can audit every licensing step, agency reference, and timeline estimate against Act 703.

Secondary Segments

These segments add breadth to the feedback and validate the platform's utility beyond the primary consultancy audience. They are approached once primary segment targets are on track.

Segment	Job Titles to Target	Why They Matter
Development Finance & Aid Professionals	Investment Officer (Mining), Programme Officer, ESG Due Diligence Lead at DFIs and impact investors	They fund and oversee mining projects across Ghana and receive desk studies from the consulting firms MineAsk targets. Their feedback validates whether reports meet investor-grade expectations for source attribution and defensibility..
Technical Consultant	Environmental Consultant, Logistics Consultant, Galamsey Remediation Specialist, ESG Analyst, GIS Specialist	They are the hands-on producers of desk study deliverables. They work daily with maps, datasets, and field data. Their feedback on report section accuracy and the Consultant Handoff Pack is operationally critical..
Policy & Government Advisors	Regulatory Affairs Advisor, Ministry of Mines consultant	They understand what government bodies need from a data platform and can speak to the regulatory integration requirements that enterprise clients will demand.

SECTION 03: MESSAGING STRATEGY

Every message sent in this campaign must speak to a problem the recipient already has. The audience does not need to be educated about the existence of the problem; they live it every week. What they need is a credible, specific demonstration that MineAsk solves it in a way that is compatible with their professional standards, their client delivery expectations, and their risk tolerance for adopting new tools. The message must feel personal, not broadcast.

Core Campaign Message

"Drop a pin on any Ghanaian mining concession. Receive a complete, source attributed ground intelligence report in under sixty seconds. We are looking for mining consultancies and law firms to test this platform on real engagements and tell us what we got wrong."

Value Proposition

MineAsk is the only platform that generates a complete, eight-section ground intelligence report for any Ghanaian mining site from a single pin drop, covering regulatory roadmaps, title profiles, logistics, land and community, environmental, Galamsey, ESG, and a fieldwork handoff pack. It replaces a desk study assembly process that currently takes five to eight working days of senior consultant time.

For this campaign, the proposition to partners is straightforward: free access to a working platform in exchange for honest, structured feedback from real engagements that will directly shape what the product becomes.

Segment-Specific Angles

The core message stays consistent. The opening line of each outreach message changes to reflect the specific pain point most relevant to that recipient's role.

Segment	Lead With This Pain Point
Mining Consultant (Firm Principal)	Your week-one desk study takes five to eight working days of senior time. MineAsk generates the equivalent structured, source-attributed deliverable in under sixty seconds, freeing your team to focus on the advisory work that actually requires human judgment.
ESG & Compliance Professionals	ESG data at the mine or concession level for Ghana does not exist in any accessible, current format. Investment decisions are being made on incomplete information.
Mining Lawyer	Every regulatory pathway analysis you produce is built from scratch, drawing on your personal knowledge of Act 703 and its amendments. MineAsk encodes that regulatory logic into a deterministic, versioned rules engine that produces an auditable roadmap you can share with clients and defend to their investment committees.

Technical Consultant	Logistics route analysis, Galamsey proximity assessment, and environmental buffer checks currently require pulling data from four or five different sources and manually assembling them. MineAsk produces all of these as structured report sections from a single pin drop, with source attribution and confidence levels included.
Development Finance Professional	The desk studies you receive from consulting firms vary wildly in format, depth, and source attribution. If the consultants you fund used MineAsk, every deliverable would arrive with consistent structure, embedded sources, and a fieldwork handoff pack that separates verified findings from items requiring site inspection

Tone and Messaging Rules

- Write in first person. The message comes from a person, not a company.
- Lead with the recipient in the first sentence, not the product. Their role, their firm, their specific practice area. Not the product.
- Keep the opening paragraph under three sentences. If a recipient has to scroll to understand why you are contacting them, they will not reply.
- Be specific. Name their firm, their country, their sector, a known concession they have worked on where possible. Generic messages get no responses.
- Never use the words 'innovative', 'revolutionary', 'game-changing', or 'cutting-edge'. These words signal marketing, not domain expertise.
- Never lead with AI. Position MineAsk as a data platform with a deterministic rules engine, not an AI product. The consultant audience is sceptical of AI-generated legal or regulatory content.
- Do not pitch. This is a feedback and validation request, not a sales conversation. There is no pricing, no subscription, no commitment beyond the feedback process.
- Use their language. Refer to Act 703, L.I. 2175, Minerals Commission processes, stool land tenure, and EITI disclosures by name. These are not jargon to the audience; they are the vocabulary of their daily work.
- Never disparage manual methods. The consultant's current workflow produces reliable results; it is simply slow and expensive. Position MineAsk as acceleration, not replacement

SECTION 04: CHANNEL PLAN

Four channels are used in this campaign: LinkedIn for cold outreach and open recruitment, email for both tester recruitment and personal post-testing feedback requests, Google Forms for tester sign-up and structured feedback collection, and the Google Forms mobile app which is how a significant portion of the target audience will access and complete the feedback form. Two supporting channels, LinkedIn content and mining association email engagement. Each channel has a defined role, activation phase, and measurable output. Each channel has a defined role, a daily volume, and a clear owner.

Channel: LinkedIn

LinkedIn is the primary cold outreach channel. It is where the majority of new tester contacts will be found and first approached. All outreach originates from a personal profile, not a company page, as personal profiles generate significantly higher response rates for direct messages.

Profile Requirements Before Outreach Begins

- Profile photo: professional headshot. Profiles without a photo receive significantly fewer responses.
- Headline: must clearly state role and MineAsk. Example: Co-Founder, MineAsk — Ghana Mining Ground Intelligence Platform.
- About section: two to three paragraphs covering who MineAsk is built for, the problem it solves, and a note that the platform is currently in MVP validation with select Ghanaian consultancies.
- Featured section: add a link to the Regulatory Roadmap Explorer with the label 'Try the free Regulatory Roadmap Explorer'.

Outreach Volume

Action	Daily Target	Weekly Target
Connection requests sent	15 to 20	75 to 100
Direct messages sent (after connecting)	8 to 12	40 to 60
Follow-up messages to non-responders	5 to 8	25 to 40
New contacts identified and queued	20 to 25	100 to 125

LinkedIn Open Post

Publish long-form posts on Ghana-specific mining due diligence topics one to two times per week. Content leads with domain expertise, not product features. Example topics include analyses of specific Act 703 licensing pathways, examinations of L.I. 2175 compensation frameworks,

discussions of Galamsey detection methodologies, and breakdowns of EITI fiscal compliance trends. The product mention, when included, appears at the end of the post as a natural extension of the expertise demonstrated. LinkedIn is a supporting channel, not a primary acquisition driver, because the consultant audience is small and better reached through direct, personalised outreach. However, consistent professional content builds the MineAsk brand presence and provides shareable material for the sales team's outreach sequences.

LinkedIn Sequencing

- Day 1: Send connection request (no pitch in the request).
- Day 2 to 3: Send direct message upon acceptance.
- Day 7: Send one follow-up to non-responders. Do not follow up a third time.

Channel 2: Email

Email is used for contacts where a professional email address is already available or can be found via a company website, research profile, or LinkedIn. It allows a longer, more detailed message than LinkedIn and is the primary channel for reaching academic and DFI contacts.

Outreach Volume

Action	Daily Target	Weekly Target
Personalised recruitment emails to contacts with known addresses	10 to 15	50 to 75
Follow-up emails to non-responders (Day 5)	5 to 8	25 to 40

Recruitment Outreach Rules

- Every email is personalised. At minimum: recipient name, their firm, and a reference to their practice area or a known engagement.
- Subject line is direct and specific. Do not use vague subject lines such as 'Quick Question' or 'Partnership Opportunity.'
- One follow-up email is sent 5 days after no response. Maximum two emails per contact before moving on.
- The Regulatory Roadmap Explorer link appears in every recruitment email, hyperlinked with the text 'Try the free Regulatory Roadmap Explorer.'

Post-Testing Personal Feedback Email

At the start of the feedback collection phase, MineAsk's Campaign Manager initiates a direct and personal communication strategy with every active tester. Rather than relying on bulk emails or automated reminders, each message is written individually and sent from the Campaign Manager's own address. This deliberate one-to-one approach is essential, as a genuine request from a real person consistently achieves stronger engagement than impersonal blasts or generic links shared without context.

Each email is carefully personalized, referencing details unique to the tester's profile—such as their sector, their country of operation, or specific points they raised during sign-up or early platform use. The feedback form link is placed prominently within the message, accompanied by a clear deadline to ensure timely responses. The communication is intentionally concise, no longer than four sentences, since testers already understand MineAsk's purpose and require only a direct ask rather than lengthy explanations.

If a tester does not respond after the initial outreach, one final reminder is sent two days before the deadline, again from the Campaign Manager's personal account. This second touchpoint is the last contact; no further follow-ups are pursued, respecting the tester's time and reinforcing MineAsk's professional tone. By combining personalization, brevity, and clarity, this feedback email process ensures higher conversion rates, strengthens relationships with Ghanaian consultancies and law firms, and secures the structured insights necessary for MineAsk's validation and growth.

Channel 3: Google Forms

For MineAsk's MVP campaign, Google Forms plays a dual role: managing tester sign-up and collecting structured feedback. Both forms must be fully prepared, tested, and confirmed functional before the first outreach message is sent on Day 1. Given that a significant portion of MineAsk's target audience in Ghana and across West Africa primarily accesses the internet via mobile devices, the forms are designed and tested specifically for the Google Forms mobile app experience, not just desktop browsers. This ensures accessibility and ease of use for consultants and law firms engaging with the Ground Readiness Report platform.

Mobile App Requirements

The Google Forms mobile app (iOS and Android) renders forms differently from a desktop browser. A form that works well on desktop can be difficult to complete on mobile if it is not built with that in mind. The following requirements apply to both the sign-up form and the feedback form before either goes live.

- Preview and test forms on an actual phone, not just desktop.
- Keep question titles short to avoid wrapping on small screens.
- Use multiple choice, checkboxes, and rating scales where possible.
- Avoid grid/matrix question types (poor mobile rendering).
- Allow response editing after submission to improve quality.
- Share via forms.gle short links, tested for both mobile app and browser.

Form 1: Tester Sign-Up Form

- Fields: Full name, Email address, Job title, Organisation, Country (dropdown), and one optional open question: What specific aspect of West Africa mining data is most relevant to your day-to-day work? (short text)
- A confirmation message is shown immediately on submission, stating that platform access details will be sent within 24 hours.
- An automatic confirmation email is set up in Google Forms settings to send immediately on submission.

- Every sign-up triggers a manual review to confirm the contact fits the target tester profile before access is granted.

Form 2: Tester Feedback Form

The full structure of MineAsk’s feedback form is documented in Appendix B, with formatting notes tailored specifically for mobile use to ensure smooth completion across devices. The form is distributed to active testers through personal email during the final week of the campaign, reinforcing the one-to-one communication strategy. Designed for efficiency, it requires no more than twelve minutes to complete on a mobile phone, making it accessible to Ghanaian consultancies and law firms who often rely on mobile internet. The questions are balanced carefully, combining quantitative rating scales that measure usability and clarity of the Ground Readiness Report with open-text prompts that capture detailed sector-specific insights. This balance ensures MineAsk gathers both structured data and qualitative feedback, providing actionable intelligence to refine the platform for audit readiness and growth.

Tester Handoff Process

The handoff from sign-up form to platform access follows a defined sequence to ensure no signed-up tester falls through.

Step	Action	Timeframe
1	Tester submits sign-up form.	Real-time
2	Campaign Manager validates the tester profile within 4 hours.	Within 4 hours
3	Platform login credentials + on boarding guide sent within 24 hours..	Within 24 hours of sign-up
4	Tester added to campaign sheet and marked “Access Sent.”	Same day
5	If no login within 48 hours, send a short personal reminder email.	48 hours after access email
6	In the final week, distribute the feedback form via personal email.	Campaign Week 3 or final week

SECTION 05: CAMPAIGN ASSETS

All assets must be built and confirmed working before Day 1 of the campaign. No outreach begins until every item in this list is marked ready.

Asset	Format	Owner	Status
Tester Sign-Up Form	Google Form	Campaign Manager	To Build
Tester Feedback Form	Google Form (mobile tested)	Campaign Manager	To Build
Platform Access Email & On boarding Guide	Email template + PDF or doc	Product Team	To Build
Outreach Tracking Sheet	Google Sheets: outreach log, response rates, feedback submissions, demo completions	Campaign Manager	To Build
LinkedIn Profile (updated)	Personal LinkedIn profile of founder or lead	Founder / Campaign Lead	To Update
LinkedIn Open Post	LinkedIn post	Founder / Campaign Lead	To Draft
LinkedIn Connection Request Copy	Message copy	Campaign Manager	Ready in Appendix A
LinkedIn Direct Message Copy	Message copy by segment	Campaign Manager	Ready in Appendix A
Email Outreach Copy	Email copy by segment	Campaign Manager	Ready in Appendix A
Follow-Up Message Copy	LinkedIn and email	Campaign Manager	Ready in Appendix A
Personal Feedback Request Email	Individual email per tester	Campaign Manager	Ready in Appendix A
Follow-Up Call Script	Document	Product Team	Ready in Appendix C

SECTION 06: CAMPAIGN CALENDAR

The calendar below is structured for a 4-week campaign, the recommended default. For a 2-week campaign, compress Weeks 2 and 3 into a single week, with feedback form sent on Day 10. For a 4-week campaign, extend the testing window of Week 2 by one additional week before moving to feedback collection.

Phase	Period	Primary Focus	Key Actions
Pre-Launch	3 days before Day 1	Preparation	All assets live and tested. Tracking sheet set up. LinkedIn profile optimised. Target firm list researched and loaded. Lawyer validation engagement proposal drafted. Regulatory Roadmap Explorer deployed and tested
Week 1	Days 1 to 7	Recruitment & Credibility	Begin lawyer validation engagement (Week 1). Publish LinkedIn open post. Begin LinkedIn connection requests and email outreach. Attend first industry event with live demo. Deploy Regulatory Roadmap Explorer. First partners on boarded with platform access.
Week 2	Days 8 to 14	Testing & Monitoring	Continue outreach to non-responders. First partners running reports on real engagements. Send follow-up messages. Attend second industry event. Collect initial feedback via feedback form. Lawyer validation engagement delivers first rulebook review draft. Begin corrections flywheel data collection.
Week 3	Days 15 to 21	Feedback & Close-Out	Distribute detailed feedback form to all active partners via personal email. Conduct demo follow-up calls. Compile feedback report. Lawyer validation engagement finalised. Identify 3 to 5 referenceable firms. Campaign close-out briefing with product team
Post-Campaign	Within 3 days of close	Analysis & Wrap-Up	Compile full feedback report. Follow up personally with every tester. Brief the product team.

		Identify the top 5 fixes for the next build sprint.
--	--	---

SECTION 07: ROLES & OWNERSHIP

Every action in this campaign has a named owner. If a task has no owner, it will not get done.

Role	Responsibilities
Campaign Manager	Owns all outreach activity. Manages the tracking sheet daily. Sends all LinkedIn messages and emails. On boards partners and monitors their platform usage. Collects and compiles feedback. Coordinates demo scheduling. Produces the campaign close-out report
Founder / Campaign Lead	Publishes the LinkedIn open post. Available to respond to senior contacts who require founder level engagement. Leads the lawyer validation engagement negotiation. Conducts live demos at industry events. Attends all partner feedback calls.
Product Team	Prepares the on boarding guide and white-label export samples. Ensures the live demo environment is stable and pre-loaded with sample concessions. Deploys and maintains the Regulatory Roadmap Explorer. Processes corrections submissions. Implements feedback driven fixes in real time where possible.

SECTION 08: KPIS & MEASUREMENT

Campaign performance is tracked daily by the Campaign Manager. The tracking sheet is updated at the end of each working day. The following metrics determine whether the campaign is on track and inform any mid-campaign adjustments.

Campaign Performance KPIs

KPI	Target	Measured By
Outreach volume (LinkedIn)	15 to 20 connection requests per wee	Tracking sheet
Outreach volume (Email)	10 to 15 emails per week	Tracking sheet
LinkedIn response rate	20% or above	Responses / messages sent
Email response rate	15% or above	Replies / emails sent

Tester sign-up rate	5 to 8 sign-ups within first 30 days	Google Form responses
Platform activation rate	At least 80% of sign-ups run at least one report	Platform login data
Feedback form completion	At least 80% of sign-ups run at least one report	Google Form responses
Roadmap-to-report conversion	At least 10% of Explorer users request full report trial	Upgrade prompt clicks

Feedback Quality Indicators

These are assessed at the end of the campaign, not tracked daily.

Indicator	What to Look For
Open-text depth	At least 15 testers provide more than two sentences in the open-text questions. Short or single-word answers indicate the tester did not engage meaningfully with the platform.
Data quality flags	Any tester who identifies a specific inaccuracy in a mine record, concession boundary, or pricing figure. These are high-value responses that require immediate follow-up.
Module coverage	Feedback covers all six platform modules. If one module receives no feedback, it was either not discovered or not accessible, which is itself a finding.
Repeat comments	Any complaint or request that appears in 3 or more responses is a priority issue, regardless of how minor it seems individually.

SECTION 09: BUDGET

This campaign has no paid media spend. All outreach is organic through LinkedIn and email. The primary cost is time. The table below documents time allocation across the campaign period so that it can be planned accurately.

Activity	Time per Day	Total Over 3 Weeks	Owner
LinkedIn contact research and outreach	1.5 hours	18 hours	Campaign Manager
Email outreach and follow-up	1 hour	12 hours	Campaign Manager
Tracking sheet updates and reporting	20 minutes	4 hours	Campaign Manager
Sign-up review and access emails	30 minutes (Days 1–7)	3.5 hours	Campaign Manager
Tester check-ins (Week 2)	30 minutes	2.5 hours	Campaign Manager
Follow-up calls (Week 3)	1.5 hours	7.5 hours	Product Team
Feedback analysis	—	4 to 6 hours total	Campaign Manager

Total estimated time investment: approximately 77 to 79 hours across the 4-week campaign. If a 3-week schedule is required, the majority of time is concentrated in the Campaign Manager role, reflecting the hands-on, personalised nature of consultant outreach

SECTION 10: RISK & CONTINGENCY

The following risks are most likely during a consultant-focused MVP validation campaign. Each has a defined response that the Campaign Manager or Founder can act on without waiting for a team decision.

Risk	Trigger Point	Contingency Action
Low sign-up volume	Fewer than 5 firms signed up by Day 30	Review and shorten the outreach message. Shift more effort to industry event demos where conversion is highest. Founder personally reaches out to the top 5 most-wanted firms by phone or in-person meeting. Consider offering an exclusive preview of the white-label export feature as an incentive.
Low platform activation	Fewer than 60% of sign-ups have run a report by Day 15	Send a personal message (not a template) to every signed-up partner offering a guided walkthrough via video call. Identify whether the barrier is technical access, relevance of sample data, or lack of a current engagement to test against. Offer to run a report on a site of their choosing and walk them through the output.
Low feedback form completion	Fewer than 50% of active partners have submitted the form by Day 18	Send the form link directly in a personal LinkedIn message or email rather than relying on the earlier send. Offer a 10-minute call as an alternative to the written form for testers who prefer to give verbal feedback. Send the form link directly in a personal LinkedIn message or email with a specific question about their experience, rather than a generic reminder. Offer a 15-minute feedback call as an alternative to the written form.
Platform instability during test period	Any tester reports an error or access failure	Product Team responds within 4 hours. Campaign Manager sends a personal message to affected testers acknowledging the issue and confirming it is being fixed. If the issue is widespread, pause new access grants until resolved.
Negative feedback on data accuracy	Multiple partners identify inaccuracies in the same report section	Treat this as the highest-priority feedback. The Product Team addresses the root cause within one week. All affected partners are personally notified of the correction. The fix is documented and shared as evidence that partner feedback directly shapes the platform, reinforcing the value of continued engagement.
LinkedIn connection limit hit	LinkedIn restricts outreach due to high volume	Slow the daily connection request volume to 10 per day. Shift to email outreach for the remainder of the week. Flag for LinkedIn Premium upgrade if this recurs.

SECTION 1: OPTIMISATION

Optimisation decisions in a 2 to 4 week campaign must be made quickly. The following framework maps specific observations to specific actions. Decisions should be made by Day 7 (end of Week 1) and Day 14 (end of Week 2). Do not wait until the campaign closes to make adjustments.

Observation	Decision Point	Action
LinkedIn response rate below 15%	Day 7	Shorten the direct message to 4 sentences maximum. Remove all feature descriptions. Lead with a single, specific question about their current desk study process. Test: "How many working days does your team typically spend on the desk study phase before fieldwork begins?"
Email response rate below 10%	Day 7	Rewrite the subject line. Test specificity: "MineAsk free report run for [Firm Name]" versus a domain-expertise subject line. Reduce email body to 3 paragraphs maximum.
One persona segment is over-represented	Day 10	Redirect outreach toward underrepresented segments. If mining consultants are signing up but no lawyers have engaged, the Campaign Manager focuses the next two weeks of outreach exclusively on law firms, adjusting the messaging to emphasise regulatory audit and rulebook validation.
Testers are signing up but not engaging with specific modules	Day 12	Identify which modules have no engagement. Add a note to the on boarding guide specifically directing testers to those modules and explaining what they contain.
Partners running reports but not providing feedback	As observed	Replace the written feedback form with a 15-minute structured call for the remaining partners. Some consultants prefer to talk rather than write. The call script (Appendix C) is designed to capture equivalent feedback in conversation format
Feedback form responses are all positive with no critical input	Day 18	This is a sign that testers are being polite rather than honest. Follow up with the most engaged testers directly and ask one specific critical question: 'What is the one thing that would stop you using this platform regularly?'

SECTION 12 : CAMPAIGN CLOSE-OUT

Campaign close-out begins on the final day of the feedback window and must be completed within 3 days of the campaign closing. It has four components.

1. Partner Follow-Up

Every partner who participated receives a personal message within 24 hours of the campaign closing. The message thanks them by name, confirms their feedback has been received, and tells them they will be among the first to know when MineAsk moves to commercial launch. For referenceable partners, the message includes a draft testimonial quote for their approval. This is not a template; it should reference something specific to each partner's engagement or feedback where possible. Partners who submitted corrections are specifically thanked for their contribution to the platform's data quality.

2. Feedback Compilation Report

The Campaign Manager produces a structured feedback report covering: total partner numbers and segment breakdown, campaign KPI results against targets, the top five issues by frequency of mention, a ranked list of feature requests, data accuracy findings by report section and by site, standout quotes from open-text feedback, corrections submitted and their resolution status, Regulatory Roadmap Explorer usage analytics, and a recommended priority list for the next build sprint. This report feeds directly into the Product Team's development planning for the Growth phase.

3. Product Team Briefing

A briefing session is held within 5 days of the campaign closing between the Campaign Manager, the Founder, and the Product Team. The feedback report is reviewed and the next development priorities are agreed. Fixes identified during the campaign that were not addressed in real time are added to the sprint backlog. The validated regulatory rulebook from the lawyer engagement is formally accepted into the product. The briefing also covers which firms are referenceable and how their testimonials and case studies will be used in the Growth-phase sales playbook.

4. Campaign Performance Summary

A one-page summary of campaign performance against all KPIs is documented for internal records. This includes the final partner count, activation rate, feedback completion rate, referenceable firm count, lawyer validation status, Regulatory Roadmap Explorer analytics, and outreach response rates by channel. This summary serves as the baseline against which any future validation or recruitment campaigns are compared, and it informs the Growth-phase budget and resource allocation decisions.

Appendix A: Outreach Message Templates

All templates below are starting points. Every message sent must be personalised with the recipient's name, role, and country at minimum. Sending identical templates without personalisation will produce significantly lower response rates.

A1: LinkedIn Connection Request

Character limit: 300. No pitch. No product name in the request if possible. The goal is the connection, not the conversion.

Hi [Name], I'm working on ground intelligence tools for Ghana's mining sector and came across your work at [Firm Name]. I'd value connecting with someone who understands the desk study process as deeply as you do

A2: LinkedIn Direct Message (after connecting)

Sent 1 to 2 days after the connection is accepted. Personalise the first sentence with a reference to their specific practice area.

Hi [Name],

thanks for connecting. I'm reaching out because your team at [Firm Name] does exactly the kind of pre-feasibility and desk study work that we've built a platform to accelerate. We've developed a tool called MineAsk that generates a complete ground intelligence report for any Ghanaian mining concession from a single pin drop, covering the regulatory roadmap, title profile, logistics, land and community, environmental, galamsey, and ESG sections, all with source attribution.

We're looking for a small group of Ghanaian consultancies to test the platform on real engagements and tell us what we've got wrong. There's no cost, no commitment, and no sales pitch. Just honest feedback from professionals who do this work every day.

Would you be open to a 15-minute call and a free report run on a site of your choice?

You can also try our free Regulatory Roadmap Explorer here: [roadmap URL] Best regards, [Your Name]

A3: Email Outreach

Subject: Free ground intelligence reports for [Firm Name] — MineAsk MVP testing

Dear [Name],

Your team at [Firm Name] produces the kind of desk studies and pre-feasibility assessments that we've spent the last year building a platform to accelerate. I'm reaching out to ask whether you'd be willing to test MineAsk, a ground intelligence platform for Ghana's mining sector, on a real engagement at no cost.

MineAsk generates an eight-section report from a single pin drop: regulatory roadmap, title and operator profile, logistics and haulage, land and community brief, environmental and water, galamsey and security, ESG indicators, and a consultant handoff pack. Every finding carries its source, confidence level, and date. The regulatory roadmap is built on a deterministic rules engine encoding Act 703 and its amendments, with versioned outputs that can be audited by your legal team.

We are recruiting ten to fifteen Ghanaian consultancies and law firms as MVP validation partners. In exchange for free access and structured feedback, you would help shape a tool designed specifically for professionals like you. There is no pricing conversation, no subscription commitment, and no sales follow-up unless you initiate it.

I'd welcome a 15-minute call to walk you through a live demonstration on a concession you recognise. You can also explore our free Regulatory Roadmap Explorer at [roadmap URL] to see the quality of the regulatory engine before committing to a call.

I will follow up once. If this isn't the right time, I completely understand.

Best regards,

[Your Name]

[Title], MineAsk

[Contact information]

A4: Follow-Up Message (LinkedIn or Email, Day 7 after no response)

Hi [Name], following up on my message from [date].

In short: we've built a platform that generates complete ground intelligence reports for Ghanaian mining concessions in under sixty seconds, and we're looking for consultancies like [Firm Name] to test it on real work.

No cost, no commitment. Just feedback from professionals who understand the problem.

If you have 15 minutes this week, I'd be happy to show you a live demo on a site of your choice.

Best regards,

[Your Name]

A5 — Personal Feedback Request Email (sent Day 15 to every active tester)

This is not a template in the traditional sense. Every version of this email must be written individually. The bracketed notes below are instructions, not copy to be sent verbatim.

Subject: Your MineAsk feedback — [deadline date]

Hi [Name],

[Reference something specific to this partner's experience: the site they tested, a correction they submitted, a report section they commented on during a call.]

We're closing the MVP validation campaign on [date]. Your feedback directly shapes what MineAsk becomes, and I'd be grateful if you could complete this short form by [deadline]: [feedback form link]

It takes about 10 minutes. If you'd prefer to talk through your feedback instead, I'm happy to schedule a 15

minute call.
Thank you for your time and for being part of this.
Best,
[Your Name]

A6 — LinkedIn Open Post (Day 1)

If you produce desk studies or pre-feasibility assessments for mining projects in Ghana, you already know the problem.
Every new engagement starts the same way: open ten browser tabs, pull Minerals Commission records, EITI disclosures, protected-area databases, road infrastructure data, and galamsey satellite imagery, then spend five to eight working days assembling it into a deliverable that your client's investment committee will scrutinise for source attribution.
We built a platform that does this in under sixty seconds from a single pin drop. Eight sections, every finding sourced and dated, regulatory roadmap based on Act 703.
We are looking for ten to fifteen Ghanaian mining consultancies and law firms to test it on real engagements. Free access, no commitment, no sales pitch. Just honest feedback from professionals who do this work every day.
If that's you, comment below or send me a message. You can also try our free Regulatory Roadmap Explorer at [roadmap URL].
Tag anyone in your network who might be interested.

Appendix B: Consultant Feedback Form

The feedback form is built in Google Forms and distributed to partners via personal email in the final month of the campaign. It contains 12 questions across five sections and takes 10 to 12 minutes to complete on both desktop and mobile. All questions are listed below with their format and the reason each question is included. The form is built mobile-first. Question titles are kept short, grid and matrix question types are not used, and the form is tested in full on the Google Forms mobile app before it is sent to any partner.

Section	Question	Format	Why It's Asked
About You	What is your job title and primary sector?	Short text	Allows segmentation of feedback by professional background.
About You	Which firm are you with?	Short text	Links feedback to the specific firm for follow up and referenceability assessment.

About You	How frequently do you produce desk studies or pre-feasibility assessments?	Multiple choice: Daily / Weekly / Monthly / Rarely	Establishes how heavy a user of this type of deliverable the partner is
Platform Usage	How many reports have you generated on MineAsk?	Multiple choice: 1 / 2 to 3 / 4 to 6 / 7+	Measures engagement depth. Partners who run multiple reports are more likely to be referenceable.
Platform Usage	Did you use MineAsk for a real client engagement?	Yes / No / Not yet	Real-engagement usage is the strongest signal of product-market fit.
Report Quality	Rate the accuracy of each report section (1-5 scale, 8 rows)	Rating scale per section	Identifies which sections need the most improvement. Sections are: Regulatory Roadmap, Title & Operator, Logistics & Haulage, Land & Community, Environmental & Water, Galamsey & Security, ESG Indicators, and Consultant Handoff Pack.
Report Quality	Which report section was most valuable to your work?	Multiple choice (one selection)	Identifies the primary value driver for each persona, informing sales messaging.
Report Quality	Did you find any specific inaccuracies in the report output?	Long text (optional)	The highest-value feedback type. Specific inaccuracies drive immediate product fixes
Workflow Impact	How much time would MineAsk save you on a typical desk study?	Multiple choice: None / 1-2 days / 3-4 days / 5+ days	Validates the core value proposition and provides a quantifiable benefit for case studies..
Workflow Impact	Would you share a MineAsk-generated report with a client under your firm's branding?	Yes / No / Maybe	Tests the white-label export value proposition and identifies adoption barriers.
Open Feedback	If you could change one thing about MineAsk, what would it be?	Long text	Unconstrained feedback captures priorities the structured questions may miss.
Open Feedback	Is there anything you think we should definitely not change?	Long text	Identifies strengths that must be preserved in future development.

Appendix C: Follow-Up Call Script

This script is used for 20-minute calls with partners who have seen a live demo or run a report and opt in for further discussion. It is a guide, not a verbatim script. The goal is to draw out what the demo and report output did not capture. Listen more than you speak. Take notes or record the call with permission.

Opening (2 minutes)

"Thank you for making time, [Name]. As I mentioned, this is a feedback conversation, not a sales call. You've already seen the platform work. What I want to understand is what it would take for a tool like this to become part of your actual workflow. There are no wrong answers, and I'll take notes so I don't have to ask you to repeat anything."

Core Questions (15 minutes)

- Walk me through how you currently produce the desk study phase of an engagement. Where do you start? What takes the most time?
- When you looked at the MineAsk report, which section did you examine first? Was that the section you expected to care most about?
- Was there a point where you noticed something in the report that surprised you, either positively or negatively?
- When you looked at a specific data point in the report, how did it compare to what you already know from your own experience or sources?
- What was missing from the report that you expected to find?
- How would you describe MineAsk to a colleague at your firm in one sentence?
- What would need to change for you to use MineAsk on every new engagement?
- Is there anything you think we should definitely not change?

Closing (3 minutes)

"That's really helpful, thank you. Is there anything else you'd want to share that we didn't cover?"

[Pause for any final comments.]

"I'll send you the feedback form link after this call. If you think of anything else after we hang up, you can add it there or just message me directly. We'll share a summary of all the feedback once the campaign closes, and you'll be among the first to know when we move to commercial launch. Thank you again for your time, [Name]."

SECTION 13: TOP 10 TARGET PROSPECTS

The following table presents the ten highest-priority target prospects for MineAsk's MVP Consultant Recruitment Campaign. These individuals were selected from the full prospect database of 67 contacts based on four criteria: seniority and decision-making authority within their organisation, the strategic importance and market influence of their firm, the direct relevance of their mining-specific expertise to MineAsk's Ground Readiness Report validation needs, and their geographic accessibility within Accra. The list is intentionally cross-segmental, covering mining consultants, mining lawyers, ESG specialists, development finance advisors, policy regulators, and mining company professionals, reflecting the campaign's emphasis on breadth of feedback across all primary and secondary audience segments. Each prospect represents a high-value validation partner whose endorsement would significantly strengthen MineAsk's credibility during the growth phase.

No	Name	Title / Role	Organisation	Segment	Why Target Them	How to Reach Them
1	Martin Ayisi	Chief Executive Officer	Ghana Minerals Commission	Policy & Government Advisor	CEO of Ghana's mining regulator; mining and petroleum lawyer with 20+ years experience; validates regulatory roadmap accuracy against Act 703.	LinkedIn: 'Martin Ayisi Minerals Commission' Email: martin.ayisi@mincom.gov.gh
2	John Isaac Kwofie	Principal Mining Engineer / Country Manager	SRK Consulting (Ghana)	Mining Consultant (Firm Principal)	Principal Mining Engineer at leading international mining consultancy; manages multi-country geotechnical and mining projects; produces desk studies and pre-feasibility assessments regularly.	LinkedIn: 'John Isaac Kwofie SRK' Email via SRK Accra office
3	Nyam Akuffo Boafo	President & CEO	Africa Mining Services & Logistics (AMS)	Mining Consultant (Firm Principal)	President & CEO of one of Ghana's largest contract mining firms; oversees mining operations and strategic planning across West Africa; validates operational and logistics modules.	LinkedIn: 'Nyam Akuffo Boafo AMS' Email: enquiries@amsgh.com
4	Seth Asante	Managing Partner	Bentsi-Enchill, Letsa & Ankomah	Mining Lawyer (Partner)	Managing Partner of Ghana's largest law firm; leads energy & infrastructure practice; advises on high-profile mining deals and regulatory compliance under Act 703.	LinkedIn: 'Seth Asante Bentsi-Enchill' Email via bentsienchill.com

5	Kimathi Kuenyehia Sr.	Managing Partner	Kimathi & Partners	Mining Lawyer (Partner)	Harvard-educated Managing Partner at tier-1 firm; ranked top 5 lawyer in Ghana by Legal 500; expert in mining sector transactions and natural resources law.	LinkedIn: 'Kimathi Kuenyehia' Email via kimathilegal.com
6	Dr. Abdul Baasit Aziz Bamba	Senior Lecturer / Mining Law Consultant	University of Ghana School of Law	Mining Lawyer (Partner)	Harvard SJD/LLM; Senior Lecturer at UG Law; consultant on natural resources law; member of Ghana Chamber of Mines LLAC; validates regulatory rules engine.	LinkedIn: 'Abdul Baasit Aziz Bamba' Email via UG Law School
7	Dr. Kojo Busia	Founding Director / Non-Exec Director, AGA	Green Africa Minerals	ESG & Compliance Professional	Founding Director of Green Africa Minerals; Non-Executive Director at AngloGold Ashanti; 26+ years in natural resources governance; validates ESG and sustainability modules.	LinkedIn: 'Kojo Busia Green Africa Minerals' Email via greenafricaminerals.com
