2-4 WEEKS

NO COMMERCIAL ACTIVITY

The Golden Rule

Never announce a product only when it is finished.

Educate → Create Curiosity → Reveal → Launch → Demonstrate Value →
Showcase Results → Establish Industry Leadership.

The MineAsk MVP Marketing Campaign Framework expands the original consultant recruitment plan into a comprehensive eight-phase content strategy. It integrates LinkedIn posts, carousels, infographics, and short-form video scripts to complement direct outreach. The campaign is designed for a focused audience of 5 to 10 mining consultancies and firms in Accra and Kumasi, aiming to validate the Ground Readiness Report by securing three to five referenceable partners. Messaging emphasizes real problems and measurable efficiencies, avoiding hype and buzzwords, while consistently using the vocabulary of mining professionals and regulatory references such as Act 703 and L.I. 2175.

Each phase is from Discovery & Market Education through Thought Leadership and is structured with objectives, KPIs, and tailored content formats. The campaign highlights MineAsk's value proposition: delivering an eight-section, source-attributed ground intelligence report in under sixty seconds, replacing desk studies that typically take five to eight days. Channels include LinkedIn for awareness, email for personalized recruitment and feedback, and Google Forms for sign-up and structured responses. By combining direct outreach with a steady stream of credible, low-hype content, the framework ensures validation, builds trust, and positions MineAsk as a long-term authority in Ghana's mining intelligence sector.

Phase 1: Discovery & Market Education

TIMELINE	Pre-launch (3 days before Day 1), overlapping with Week 1
OBJECTIVE	Create awareness of the manual desk-study problem in Ghana's mining sector before introducing the platform.
KPI FOCUS	Reach, impressions, engagement rate on LinkedIn open posts.

LinkedIn Text Post

Most mining consultancies in Ghana didn't choose to spend their first week of every engagement assembling regulatory and ESG data. But that's often where the time goes: ten browser tabs of Minerals Commission records, EITI disclosures downloaded as PDFs, protected-area databases that don't talk to each other, road infrastructure layers pulled from three different sources, and Galamsey satellite imagery stitched together by hand.

Each manual step only costs a few hours on its own. Multiply that across the three to eight engagements a typical firm principal manages per quarter, and the hours turn into missed deadlines, duplicated records, and senior consultant time that nobody budgeted for.

Ground intelligence isn't about replacing consultants, it's about giving them fewer sources to chase and more time for the advisory work that actually requires human judgment. How is your team currently handling source attribution in your week-one desk studies? Genuinely curious what's working and what isn't.?

[#MiningDueDiligence](#) [#GhanaMining](#) [#Act703](#) [#DeskStudys](#)

Infographic (Image Concept)

"The Hidden Cost of Manual Desk Studies."

A left-to-right icon sequence: ten browser tabs → scattered Minerals Commission PDFs → a manual map overlay with mismatched concession boundaries → a late, hand-built deliverable — dissolving into a single clean pin-drop report on the right.

Carousel: LinkedIn

- Slide 1: “3 Signs Your HR Process Still Runs on Paper (Even If It's ‘Digital’)”
- Slide 2: Approvals happen over email, not through anything that tracks them.
- Slide 3: The same employee detail gets typed into three different tools.
- Slide 4: Nobody can say, without checking, how many leave days are outstanding right now.

- Slide 5: None of this is a people problem. It's a systems problem, more on that soon.

Video / TikTok Script: Problem-Focused Storytelling (30 sec)

- **Opening:** Senior consultant at a desk buried in browser tabs and printed PDFs, a half-eaten lunch pushed to the side.
- **Narrator:** "Ten browser tabs. A folder of Minerals Commission PDFs. Concession boundaries pulled three different ways. EITI disclosures that haven't been updated since the last election."
- **Cut to:** A clean pin-drop report sliding into frame within eight sections, every line sourced and dated.
- **Narrator:** "Serious mining advisory teams don't assemble ground intelligence this way for much longer. Something's changing here, stay tuned."

Phase 2: Problem Agitation

TIMELINE	Week 1 (Days 1–7), running parallel with outreach.
OBJECTIVE	Help the audience understand the real cost of not solving the manual assembly problem.
KPI FOCUS	Comments, shares, conversations generated, segment-specific DMs.
CTA	"What does your week-one desk study actually cost your firm?"

LinkedIn Text Post: Case Study Framing

A delayed regulatory pathway analysis doesn't just annoy the lead partner on a mining engagement. Here's what it usually sets off: the field team waits for the go-ahead, the investor committee meeting slips by a week, the ESG analyst pulls stale data to fill the gap, and the headline number in the deliverable now carries a footnote that nobody on the team fully trusts.

None of that shows up as a single line item anywhere. It shows up in slower decisions, frustrated clients, and figures that get quietly hedged in the next board pack. The real cost of manual desk-study assembly isn't the time itself but it's everything that time was supposed to protect: source attribution, defensibility, and trust. A deliverable your client's investment committee can't interrogate is a deliverable that quietly costs you the next engagement.

What's the most recent example you've seen of a small desk-study delay turning into a bigger problem downstream?

Split-Screen Comparison (Image Concept)

"Manual Desk Study vs. MineAsk Ground Readiness Report."

Left side: Stacked PDFs, scattered browser tabs, red flag icons for delay, source gaps, and mismatched concession boundaries.

Right side: A live pin-drop report with eight sections, green check icons for source attribution, Act 703 alignment, and versioned outputs.

Video Script: Scenario Storytelling

- Scene 1: Partner opens a new engagement file, assigns the desk study to a senior consultant with a five-day deadline.
- Scene 2: Senior consultant opens ten tabs; the Minerals Commission portal times out, the EITI PDF won't load, the satellite imagery is two years out of date.
- Scene 3: The deadline arrives. The deliverable ships with gaps marked "to be confirmed during fieldwork."
- Scene 4: The investor committee asks for the source on a key Galamsey proximity figure. Nobody on the team can produce it.

- Narrator: "One deliverable. Three missed handoffs. Now multiply that by every engagement this quarter."
- Fade to text: "There's a faster way to move ground intelligence through your firm."

TikTok Before/After Skit

- Text overlay: "POV: you shipped a desk study with an unsourced galmsey claim."
- Quick cuts: investor email → partner scrambling → checking WhatsApp for the analyst → analyst on annual leave.
- Text overlay: "Meanwhile, in a Ground Readiness Report:"
- Cut: A MineAsk report line expands to show source agency, document, retrieval date, and confidence level all on one tap.
- Caption: "Same concession. Very different Monday." week."

Phase 3: Build in Public

TIMELINE	Week 1–2 (Days 3–10).
OBJECTIVE	Show that a solution is actively being built and validated with real Ghanaian firms.
KPI FOCUS	Follower growth, post saves, profile visits, LinkedIn connection acceptance rate.
CTA	"We're building something for Ghanaian mining consultancies — and we want you to shape it."

LinkedIn Text Post

Behind every section in the Ground Readiness Report sits a conversation with a senior consultant or mining lawyer who lives with the desk-study problem daily.

Over the past year we sat with firm principals, ESG officers, and mining company land managers to understand where their week actually goes — not where the policy says it should go, where it does go. We watched them open the same ten tabs, type the same concession coordinates into three different portals, and rebuild the same Galamsey proximity map from scratch for every new engagement.

Their answers shaped what we're building: which regulatory pathway needs Act 703 encoding, which title data shouldn't need to be requested twice, which ESG indicator sets don't exist in any accessible format for Ghana, and which Galamsey proximity check shouldn't need five satellite sources.

We're not finished. But we're close, and we're bringing a small group of Ghanaian firms along for the rest of the build.

Behind-the-Scenes Photo (Image Concept)

The product team around a table, wireframes visible on a shared screen labelled "Regulatory Roadmap," "Title & Operator," "Galamsey & Security," and "Consultant Handoff Pack." Candid, not staged. A printed copy of Act 703 sits open beside a laptop.

Video Script: Development Snippets (Fast-Paced)

- Quick cuts: Sketching a regulatory flow on a whiteboard, two people debating a screen, a laptop showing an early pin-drop interface, a mining lawyer reviewing the Act 703 rulebook with a red pen.
- Narrator (casual): "Every report section. Every source citation. Every confidence level. It all started with one question — what would actually make this senior consultant's Monday easier?"
- "End card: "Building in progress. More soon."

Carousel: "5 Questions We Asked Before Writing a Line of Code"

- Slide 1. Who actually produces this desk study today, and how many working days does it take them?
- Slide 2. What happens when the lead consultant is travelling and a client needs the deliverable tomorrow?
- Slide 3. Where does this data need to show up next — investor committee, regulator filing, field team briefing?
- Slide 4. What's the one section every mining lawyer opens first when they receive a desk study?
- Slide 5. What would make them trust the report enough to stop double-checking the source on every figure?
- Slide 6. Closing slide: These questions shaped every section we're building. Follow along as we share more.

Phase 4: Product Teaser Campaign

TIMELINE	Week 1 (Days 5–7).
OBJECTIVE	Generate curiosity ahead of the Regulatory Roadmap Explorer launch and partner onboarding.
KPI FOCUS	Reach, engagement rate, guesses/comments, Explorer sign-ups.
CTA	"Can you guess what we're launching for Ghana's mining sector?"

LinkedIn Text Post

Picture one platform where regulatory roadmaps, title profiles, logistics and haulage, land and community briefs, environmental and water, Galamsey and security, ESG indicators, and a consultant handoff pack all live together — no switching tabs, no re-entering the same concession coordinates twice.

One week from now, we're opening it in validated form to a small group of Ghanaian consultancies and law firms. Here's a hint: it replaces a five-to-eight-day desk-study assembly with a single, source-attributed deliverable you can actually defend to an investment committee.

Any guesses what we're launching?

Teaser Graphic (Image Concept)

A darkened report silhouette with only the eight section icons glowing: a gavel (Regulatory Roadmap), a map pin (Title & Operator), a truck (Logistics), a handshake (Land & Community), a water drop (Environmental & Water), an alert triangle (Galamsey & Security), a leaf (ESG), and a briefcase (Consultant Handoff Pack). Countdown overlay: "7 Days." Tagline: "Something Smarter Is Coming for Ghana Mining."

Video Script: Countdown (15 sec)

- Quick blurred cuts: an Act 703 pathway chart, a pin-drop animation landing on a concession, a map with ESG overlays, a Logistics route highlighted in blue.
- Text overlay counts down: 7 ... 5 ... 3 ...
- End card: "One pin drop. Eight sections. Coming soon."

TikTok: Guess the Feature

- Text overlay: "Can you guess what we're building from these 3 clues?"
- Clue 1: A map pin dropping onto a concession boundary.
- Clue 2: A gavel icon with the label "Act 703."
- Clue 3: A clock icon showing "60 seconds."
- Caption: "Drop your guess below. Reveal next week."

Phase 5: Feature Reveal Series

TIMELINE	Week 1–2 (Days 6–12).
OBJECTIVE	Introduce product capabilities, one feature per post. Structure: Problem → Feature → Benefit.
KPI FOCUS	Explorer visits, full-report trial requests, demo bookings.

LinkedIn Text Post: Feature Spotlight: Smart Notifications & Approvals

Problem: Every regulatory pathway analysis you produce is built from scratch, drawing on your personal knowledge of Act 703 and its amendments. When a junior asks how you got to a particular licensing step, you can't always point them to a documented source.

Feature: The Regulatory Roadmap Explorer encodes that regulatory logic into a deterministic, versioned rules engine that produces an auditable pathway you can share with clients and defend to their investment committees. Every step references the specific section of Act 703, the agency involved, and the expected timeline.

Benefit: Faster pathway analysis, fewer follow-up questions from legal teams, and a paper trail that updates itself with every legislative amendment. No more rebuilding the same licensing flow for every new concession.

Audit-ready. Always current. Try the free Regulatory Roadmap Explorer.

Dashboard Image (Image Concept)

Screen showing the live pin-drop report with the Regulatory Roadmap section expanded — step-by-step licensing pathway, agency references, timeline estimates. Beside it, a phone mock-up displays a push notification: "Act 703 pathway updated for [concession name]." Callout text: "Audit-ready. Always current."

Video Script: Problem to Solution Demo

- Opening hook: "Most regulatory pathway analyses get stuck because someone simply hasn't checked the latest L.I. 2175 amendment."
- Problem context: A partner's crowded inbox, unread regulatory update notifications climbing.
- Transition: "This is exactly what we built the Regulatory Roadmap Explorer to solve."
- Demo: Drop a pin on a concession → select "Mining Lease" pathway → see step-by-step timeline with Minerals Commission references → tap to export as a versioned PDF with source citations.
- Outcome: "What this enables: defensible timelines in minutes, not days."
- Close: "This is what practical ground intelligence looks like."

TikTok: Second Feature: Centralised Employee Records (20 sec)

- Text overlay: "One finding. One source. One date."

- Screen recording: Tap any line in the report → see source agency, document title, retrieval date, and confidence level pop up in a clean card. No more unsourced claims in your desk study.
- Caption: "No more unsourced claims in your desk study."

Phase 6: Launch Week

TIMELINE	Week 1–2 (Days 7–14).
OBJECTIVE	Officially open the Regulatory Roadmap Explorer and onboard the first MVP partners.
KPI FOCUS	Demo bookings, article reads, share rate

DAY 1: ANNOUNCEMENT

LinkedIn Text Post: Official Launch

Today we're opening the free Regulatory Roadmap Explorer: a deterministic, versioned rules engine that produces Act 703 licensing pathways for any Ghanaian mining concession, with every step sourced and dated.

Built for mining consultancies, law firms, and ESG teams that are tired of rebuilding the same regulatory analysis from scratch every engagement and ready to replace it with something that's auditable, current, and defensible to an investment committee.

We're also opening MVP validation partner slots. If your firm produces desk studies or pre-feasibility assessments for Ghanaian mining assets, you can request free access to the full Ground Readiness Report platform in exchange for honest, structured feedback. There is no pricing conversation and no commitment beyond the feedback process.

Try the free Explorer below. Partner sign-up form in the comments.

Video / TikTok Script: Reveal

- Product reveal animation cutting into a live Explorer walkthrough: pin drops on a concession, the eight report sections fan out, source citations appear on tap.
- Narrator: "Meet the Regulatory Roadmap Explorer — the first module of the MineAsk Ground Readiness Report. Drop a pin. Get a sourced, dated, auditable Act 703 pathway in under sixty seconds. Free to use. Partner slots open for the full eight-section report."

DAY 2: PRODUCT DEMONSTRATION

LinkedIn Post

A full walkthrough of the Regulatory Roadmap Explorer starting from pin drop to versioned PDF export, in under ninety seconds. Video embedded below.

Video Script: Dashboard Walkthrough

- Opening hook: "This Explorer shows you every Act 703 pathway that used to be invisible in a desk study."

- Context: Who this view is for — mining consultants, lawyers, ESG analysts — and why it matters for week-one deliverables.
- Walkthrough: Pin-drop on a known concession, pathway selection (Prospecting Licence, Mining Lease, Reconnaissance), step-by-step timeline with agency references, tap-to-export as versioned PDF.
- Outcome: "Instead of guessing, your team can act with defensible sources."
- Close: "Good sources lead to better investment decisions."

TikTok — Live Demo (Condensed)

Same walkthrough, cut to twenty seconds, captions on screen instead of narration. Pin drop → pathway selection → export → "Free to try. Link in bio."

DAY 3 — CUSTOMER VALUE

Carousel: “5 Things Ground Readiness Report Replaces”

- Slide 1. A spreadsheet tracking concession boundaries pulled from three different sources.
- Slide 2. A folder of Minerals Commission PDFs last updated when someone remembered to check.
- Slide 3. A manual ESG data pull that doesn't exist in any accessible format for Ghana.
- Slide 4. A hand-built galamsey proximity map stitched from five satellite sources.
- Slide 5. A Logistics route analysis rebuilt from scratch for every new engagement.
- Slide 6. Closing slide: "One report that already knows the answer — sourced, dated, and ready to defend."

TikTok: Problem Solved in 30 Seconds

Fast-cut demo of a single pain point resolved start to finish and finding a concession's outstanding licensing steps without a single phone call or a return trip to the Minerals Commission portal.

DAY 4: TECHNICAL DEEP DIVE

LinkedIn Text Post: Architecture & Security

Under the hood: how we built Ground Readiness Report to hold up at real advisory-firm scale.

- A deterministic rules engine, not a generative model. Every regulatory pathway is encoded from Act 703 and its amendments, with versioned outputs that can be audited by your legal team.
- Source attribution on every finding. Every line in the report carries its source agency, document title, retrieval date, and confidence level.
- A modular structure, so new report sections and new data sources can be added without rebuilding the engine underneath them.

Enterprise-grade ground intelligence shouldn't require an enterprise budget to maintain. Here's how we kept it lean without cutting corners on defensibility.

TikTok: How It Works (15 sec)

Simple animated flow: pin drop → query data sources → assemble sections → attribute sources → export.
Captioned, no voiceover.

DAY 5: CALL TO ACTION

LinkedIn Text Post: Book a Demo

You've seen the Explorer. You've seen how source attribution works. The only thing left is trying the full eight-section Ground Readiness Report on a concession you actually know.

Book a fifteen-minute call this week and we'll run a live report on a site of your choosing and no generic pitch, just your engagement's data on our platform. If you'd rather test independently, request partner access via the Google Form and we'll send credentials within twenty-four hours.

There is no pricing conversation. There is no commitment beyond the feedback process. There is no sales follow-up unless you initiate it.

Video / TikTok — Reminder Clip

Short clip closing the launch week arc: "Still thinking about it? Here's how to get started," with the sign-up form link and demo booking link on screen.

Phase 7: Social Proof & Adoption

TIMELINE	Weeks 2–4 (Days 10–28) and post-campaign.
OBJECTIVE	Build trust through real partner usage and feedback.
KPI FOCUS	Active partner count, feedback form completion, referenceable firms secured, corrections submitted

LinkedIn Text Post — Customer Spotlight

Since joining the MVP validation, one consultancy's senior team cut their week-one desk-study assembly from an average of five working days to under one hour of review time — and stopped maintaining concession boundary data in more than one place.

“We used to spend the first two days of every engagement just pulling regulatory and ESG data from ten different sources. Now that time goes to the advisory work that actually requires human judgment — reviewing the report, pressure-testing the findings, and preparing the client conversation.”

Real transformation doesn't need to be dramatic. It just needs the friction removed and the sources cited.

Photo + KPI Highlight (Image Concept)

Professional photo of the partner firm's team at their office in Accra. Testimonial quote overlay in the upper-left, single KPI callout in the lower-right: "5 days → 1 hour" in oversized gold numerals.

Video Script: Customer Interview

Customer: *"Before, every desk study started with ten tabs and a prayer. Now I drop a pin, get the eight sections, and spend my time reviewing instead of assembling. Every department works from the same source-attributed base, which means the legal team, the ESG analyst, and the field lead are all looking at the same numbers. It's changed how we run the first week of an engagement."*

Dashboard b-roll plays under the quote as voiceover: pin-drop animation, section expansion, source citation cards popping on tap.

Carousel: “3 Months In: What Changed”

- Slide 1. Desk-study assembly time: 5 days → 1 hour of senior review.
- Slide 2. Duplicate data entry across departments: eliminated. Legal, ESG, and field teams now work from one source-attributed base.
- Slide 3. Monthly headcount of concessions tracked: automatic, not manual. The report knows what's outstanding without anyone checking.
- Slide 4. Closing slide: "Want to see how this could work for your team? Join the MVP validation partner sign-up in the comments."

Phase 8: Thought Leadership & Long-Term Growth

TIMELINE	Ongoing (post-campaign, feeds Growth phase).
OBJECTIVE	Position MineAsk as a ground intelligence leader for Ghana's mining sector.
KPI FOCUS	Brand authority, partnership inquiries, Growth-phase pipeline growth, sector citations.

LinkedIn Text Post

The future of mining due diligence in Ghana isn't more manual assembly. It's better intelligence.

Firms that thrive over the next decade won't just digitise paper processes, they'll build workflows where ground intelligence moves on its own, partners decide from real-time source-attributed data, and senior consultants spend less time proving their report happened and more time doing the advisory work that requires judgment.

Ground intelligence platforms aren't a trend to adopt eventually. They're becoming the baseline for how serious mining advisory work operates in Ghana and the same way ETI disclosures shifted from optional to expect over the last decade.

Is your firm ready for that shift, or still catching up to it?

Executive Report Cover (Image Concept)

Report cover titled "The Future of Ground Intelligence & Mining Due Diligence in Ghana," featuring pin-drop report visuals, a stylised concession map of Ghana, and workforce insight charts. Subtitle: "From Manual Assembly to Source-Attributed Intelligence."

Video Script: Expert Commentary Reel

Talking-head style, founder or lead consultant speaking directly to camera:

"Here are three mining due diligence trends worth preparing for now: source-attributed ground intelligence, deterministic regulatory rules engines, and real-time concession analytics. None of these are future concepts — they're already reshaping how serious Ghanaian advisory work runs. The question for firm principals is whether you build the workflow now, or rebuild it under pressure when your largest client asks why their competitor's deliverable arrived sourced and yours didn't."

TikTok — Educational Explainer Series

"3 mining due diligence trends that aren't optional anymore": quick captioned list format, one icon per trend, five seconds each.

- Icon 1: Gavel — Regulatory rules engines encoding Act 703.
- Icon 2: Map Pin — Source-attributed ground intelligence.
- Icon 3: Chart — Real-time concession analytics.

LinkedIn Article Teaser

We just published a short breakdown of what separates ground intelligence platforms that get adopted from ones that get abandoned after month two. The pattern is consistent: it's almost never the technology. It's whether the firm's senior consultants trust the sources enough to stop double-checking every figure. Link in the comments.

KPI Summary by Phase

Phase	Primary KPI
1. Discovery & Market Education	Reach, impressions, engagement rate on LinkedIn open posts.
2. Problem Agitation	Comments, shares, conversations generated, segment-specific DMs.
3. Build in Public	Follower growth, post saves, profile visits, connection acceptance rate.
4. Product Teaser Campaign	Reach, engagement rate, guesses/comments, Explorer sign-ups.
5. Feature Reveal Series	Explorer visits, full-report trial requests, demo bookings.
6. Launch Week	Explorer launches, Google Form sign-ups, partner activation rate, demo bookings.
7. Social Proof & Adoption	Active partner count, feedback completion, referenceable firms secured, corrections submitted.
8. Thought Leadership & Growth	Brand authority, partnership inquiries, Growth-phase pipeline growth, sector citations.
