3. Hypothesis Log

Hypothesis Log

#	Assumption	How We'll Test	Success Metric	Result	Date
1	Mining regulators need centralized mineral intelligence dashboards	Conduct 10 interviews with regulators	7/10 express active pain	Pending	May 13, 2026
2	Organizations will pay for mining analytics subscriptions	Offer early-access pricing calls	3 organizations request pricing	Pending	May 13, 2026

#	Assumption	How We'll Test	Success Metric	Result	Date
3	GIS-based visualization improves mining decision-making	Demo clickable prototype	80% positive usability feedback	Pending	May 13, 2026
4	Ghana is a strong entry market before ECOWAS expansion	Validate with mining stakeholders	5 stakeholders support Ghana-first rollout	Pending	May 13, 2026
5	WhatsApp outreach converts better than email in Ghana	Compare outreach response rates	2× higher response rate	Pending	May 13, 2026

4. Interview Documentation Template

Interview Notes Template

Interview Information

- Name:
- Organization:
- Role:
- Date:
- Interviewer:
- Contact Method:

Current Workflow

- How do they currently collect mining data?
- What tools/software do they use?
- What reports do they generate?

Problems & Pain Points

Write answers VERBATIM.

Examples:

- “We struggle to consolidate regional mining data.”
 - “Most reporting is manual and slow.”
 - “GIS visibility is limited.”
-

Existing Solutions

- What platforms are they currently using?
 - What do they dislike about them?
 - What do they wish existed?
-

Budget & Purchasing Signals

- Do they already pay for analytics tools?
 - Who approves purchases?
 - Estimated software budgets?
-

Feature Requests

Document exactly what they ask for.

Important Quotes

Capture direct statements for future:

- marketing
- investor decks
- pitch materials

5. Why Us, Why Now Narrative

Why Us, Why Now

Africa is entering a major mineral and resource intelligence era driven by increasing global demand for strategic minerals such as gold, lithium, manganese, cobalt, and rare earth materials.

Despite the continent's enormous mineral wealth, mining intelligence across many African countries remains fragmented, difficult to access, poorly visualized, and heavily dependent on disconnected spreadsheets, static reports, and siloed government systems.

At the same time, governments, mining companies, investors, researchers, and environmental organizations increasingly require:

- centralized mining intelligence,
- geospatial visibility,
- production analytics,
- environmental monitoring,
- and data-driven decision-making tools.

Starting with Ghana provides a strategic entry point due to:

- its strong mining sector,
- growing lithium interest,
- relatively stable regulatory environment,
- and regional influence within ECOWAS.

The timing is especially important because:

- strategic mineral demand is accelerating globally,
- African governments are prioritizing resource governance,
- digital GIS infrastructure is becoming more accessible,
- and there is still no dominant African-focused mineral intelligence platform serving this market comprehensively.

This creates an opportunity to build a foundational digital infrastructure layer for African mining intelligence and resource monitoring.
