

"AI Just Applied For Your Job — Did It Get The Offer?"

Full Segment Write-Up | 3Music TV

TITLE OPTIONS (ranked for a TV audience)

1. "AI Just Applied for Your Job — Did It Get the Offer?" — strongest, funniest, most shareable clip title.
2. "Fired by a Robot: Is Your Job Ghana-Proof or AI-Proof?" — good for a punchier promo cut.
3. "The Great Job Heist: How AI Is Quietly Stealing Ghana's Workforce" — most dramatic, use if you want an alarmist cold open, but balance it with the "no need to panic yet" tone by the end.

Recommendation: Open with Title 1 as the segment name, use Title 2 as an on-screen lower-third teaser, and use Title 3 sparingly as a rhetorical question you ask and then knock down.

COLD OPEN (60-90 seconds)

Suggested hook line:

"Somewhere in Accra right now, a call centre is training its staff.. to train the chatbot that will replace them. Tonight — is your job Ghana-proof, or AI-proof?"

Follow with a rapid-fire visual/verbal list of jobs already touched by AI globally, then narrow to Ghana specifically. Keep it light — this should feel like a "test yourself" segment, not a doom broadcast.

SECTION 1: What's Already Being Eaten (5-7 mins)

Highest near-term risk in Ghana (roles built on repetitive, rules-based, digital tasks):

- Data entry and basic transcription
- First-line customer service / call centre scripts (chatbots, WhatsApp bots, voice AI)
- Junior/basic bookkeeping and reconciliation
- Basic graphic design (templated flyers, social media graphics, logo drafts)
- Entry-level translation and copywriting
- Junior paralegal document review

Lowest risk through 2030 (things AI still can't touch well):

- Anything needing physical presence and dexterity — trades, construction, repair, agriculture
- Jobs requiring cultural judgment, trust, and negotiation — sales relationships, chieftaincy/traditional roles, HR mediation
- In-person care work — nursing, childcare, elder care

- Skilled trades that combine judgment + hands — electricians, mechanics, tailors
- Roles requiring accountability and legal signature — licensed engineers, doctors, judges (AI can assist, can't replace the liability-bearing human)

On-air framing tip: Don't present this as "these jobs will disappear tomorrow." Frame it as "these are the first roles where AI is doing *part* of the job already — the entry point shrinks before the job fully vanishes." That's more accurate and less alarmist.

SECTION 2: The Policy Gap — Corrected (this is your strongest, most exclusive segment)

This is where your show can genuinely break something your audience hasn't heard elsewhere, **if you use the updated facts:**

Ghana

- Ghana **did** launch a National AI Strategy — **April 24, 2026**, unveiled by President Mahama, Ministry of Communication, Digital Technology and Innovations.
- 84-page document, covering **2025–2035**, structured around **8 pillars** and **73 policy recommendations**. One pillar is explicitly "Expand AI Education" — includes an "AI Ready Ghana" training programme.
- Funding: a **National AI Fund** starting at **GH¢5 billion (2025–2030)**, scaling to **GH¢15 billion (2030–2035)** — plus an ambition to attract GH¢200 billion in FDI/private investment into the AI ecosystem.
- **The honest caveat to raise on air:** a strategy document is not the same as an enforced law. As of mid-2026, Ghana still has **no enacted AI legislation** — a National AI Policy/bill has reportedly been in consultation for roughly two years, with an AI Oversight Board and mandatory impact assessments proposed but not yet passed by Cabinet or Parliament. So: big vision, funding pledged, but implementation and legal teeth are still catching up. That tension — bold strategy vs. slow legislative follow-through — is a great debate point for a panel.
- Complementary existing programme: the **"1 Million Coders Programme"** — had drawn close to 150,000 applicants by mid-2025.

On-air line you can use:

"So it's not true anymore that Ghana has no plan — we actually just got one of the boldest AI strategies in the region. The real question is whether the ₵5 billion and the 73 recommendations turn into actual retraining funds people can walk into and use."

Kenya (comparison point)

- Kenya's **National AI Strategy 2025–2030**, developed through 2024–2025, plus the **DigiKen initiative**: 15 Digital Innovation Hubs (from late 2024) delivering community-level digital and AI-literacy training, targeted especially at women, youth, and small entrepreneurs.

- Frame this as "workforce-facing infrastructure" rather than a single named "fund" — that keeps you accurate.

Nigeria (comparison point)

- Nigeria's federal government launched a **free AI Academy** via the Ministry of Innovation, Science and Technology (announced December 2024), delivered in partnership with the Commonwealth Secretariat and Intel.
- Layered on top: **Data Science Nigeria (DSN)** runs nationwide free beginner classes and an annual AI Bootcamp across multiple cities; **NITDA** partners with global tech firms for free certifications; state-level efforts like **OgunLearn** (launched January 2026) are emerging too.
- Bootcamps and free/low-cost AI training exist in Lagos, Abuja, and Port Harcourt through a mix of government, non-profit (e.g. Port Harcourt School of AI), and community organisations (She Code Africa) — accurate to say training access is real and growing, even if not one single unified national fund.

Regional summary line for the show:

"Ghana just leapfrogged with a big funded strategy on paper. Kenya built grassroots digital hubs first. Nigeria went wide with free bootcamps across multiple cities. Three different bets — and we won't know which one actually reskills the most people for another two or three years."

SECTION 3: The Informal Sector Question — Corrected Stat (great tension point)

- **Corrected figure:** Ghana's informal sector employs roughly **75–80% of the workforce** (Ghana Statistical Service 2024 "Productivity, Employment and Growth" report; UNDP Ghana Human Development Report 2023 cites 75%; other GSS citations put it near 80%). This is *higher* and more dramatic than the ~60% figure in the original notes — use the bigger number, it's better TV and it's accurate.
- The same GSS report notes the paradox: informal work employs ~80% of workers but generates only around **27% of GDP** — the formal 20% of the workforce produces roughly 73% of GDP.
- **The real debate to have on air:** is the informal sector "safe" from AI, or just "delayed"?
 - **Case for real safety (short-to-medium term):** market trading, artisanal trades, small-scale agriculture, transport (trotro/taxi), and personal services depend on physical presence, cash-based trust networks, and hyper-local knowledge that current AI tools can't replicate cheaply in Ghana's context.
 - **Case for delayed disruption:** AI is already creeping into informal-adjacent tools — mobile money fraud detection, WhatsApp-based customer bots for small traders, AI-assisted stock/inventory apps. The disruption may not be "AI replaces the trader" but "AI replaces the *need* for certain informal middlemen" (e.g., AI logistics apps replacing informal brokers).

- **Honest answer to give the audience:** informal work is protected from *direct* automation longer than formal white-collar work, but it is not protected from *indirect* disruption as AI reshapes the digital and financial infrastructure informal workers rely on (mobile money, delivery platforms, pricing apps).
-

SECTION 4: "Is Your Job Ghana-Proof?" — Interactive Segment Idea

Turn this into a call-in/live-poll moment:

- Ask viewers to text or comment their job title.
 - Give a live, honest 3-tier verdict system:
 -  **Ghana-proof for now** — needs physical presence, trust, or licensed judgment.
 -  **AI-assisted, not replaced** — AI will do 30–50% of the task, human keeps the job but the job changes.
 -  **High exposure** — entry-level version of this job is shrinking now.
 - This works well visually as a simple on-screen graphic/lower third per caller.
-

SECTION 5: The "Panic or Pivot" Close (2–3 mins)

Practical, non-alarmist advice to leave the audience with:

1. **Don't panic about the informal sector disappearing** — it won't, not on any near-term timeline. But don't assume it's permanently immune either.
 2. **If your job is in the  zone:** the fastest practical move isn't "learn to code" — it's learning to *operate and supervise* the AI tool that threatens your task (e.g., a graphic designer who becomes the person directing AI tools and doing final human judgment/taste calls, not the person still doing everything by hand).
 3. **Free/low-cost places to actually start today** (verified, not vague):
 - Ghana's own "1 Million Coders Programme" and the incoming "AI Ready Ghana" programmes tied to the new national strategy.
 - Google's free Generative AI Learning Path (a few hours, no cost) as a genuine zero-cost first step, before investing money in any paid bootcamp.
 4. **The bigger civic question to leave hanging:** Ghana now has a strategy and a funding pledge — the audience's job, as citizens, is to watch whether that GH¢5 billion actually reaches retraining programmes ordinary workers can access, or stays at the policy-document level. That's a good "stay tuned" close and a reason to revisit this topic on the show in 6–12 months.
-

SOURCE LIST (for your producer / fact-check reference)

- Ghana Ministry of Communication, Digital Technology and Innovations — National AI Strategy launch, April 24, 2026 (moc.gov.gh)
- Ghana News Agency — coverage of National AI Strategy 2025–2035

- GhanaFact — detailed breakdown of the strategy's 8 pillars, 73 recommendations, and National AI Fund figures
 - JBKlutse — analysis of the gap between the strategy and enacted AI law/legislation
 - OECD.AI Policy Observatory — Ghana's earlier National AI Strategy 2023–2033 draft (superseded/absorbed by the 2025–2035 launch)
 - Ghana Statistical Service — "Productivity, Employment and Growth" report, 2024 (informal sector ~80% of employment, ~27% of GDP)
 - UNDP Ghana Human Development Report 2023 (75% informal sector figure; youth unemployment ~65% for 15–24 cited in that report's framing)
 - Kenya ICT Ministry / Team4Tech / CIPIT — Kenya National AI Strategy 2025–2030 and DigiKen Digital Innovation Hubs
 - Nigeria Federal Ministry of Innovation, Science and Technology — Free AI Academy launch, December 2024
 - Data Science Nigeria (DSN) — nationwide AI bootcamp programme
-

Note: Some cedi/naira figures cited by secondary sources (e.g., the Ghana AI Fund's GH¢5bn figure) come from official government launch statements; treat any numbers not yet reflected in a passed budget line as "announced," not "disbursed," when presenting on air.
