

Integrated Solution Platform for Mining & Production Labs

WHAT'S COVERED AT LABSOLS?

Software for Lab

Labsols releases latest LIMS version for Mining & Production laboratories

Add-Ons for Lab

Labsols rolls out various demanding plug-ins and integrations for lab

Services for Lab

Labsols covers different range of important services needed by labs

Bit Wave Solutions Limited

Davison House,
Kings Road,
Reading, RG1 3EU, UK

LABSOLS LIMS – MINING & PRODUCTION LABS

Manages different mineral tests and sample types

Drill Chipping, Bore Hole, Material Processing, Kiln Feed Silo/Belt/Feeder, etc.

Barcode & Audit Trail

Incorporates traceability from the beginning, with barcode integration from start to finish with complete audit trail.

Integrated quality control protocols

QC protocols that check and monitor the preparation and analytical processes provide real-time feedback for failures.

Powerful Calculation Capabilities

Automated calculations are set for mineral testing to accelerate workflows and efficiency. Generate OCM calculated indicative results based on result entries.

Tablet Facility Technology

Tablet based flexibility to record the mineral test observations in to the application rather than the paper.

Powerful Dashboards

Powerful dashboard providing traceability of both in-specification and out-of-specification mineral samples.

Integrated On-Demand Reporting

Comes with a collection of excellent preconfigured reports on different categories in the lab includes mineral test results.

Instrument Integration

Integration to automates mineral testing lab instruments and automatic acquisition of results within the system provides increased data reliability.

LABSOLS

"Our specialty of delivering LIMS customized according to the client's current lab process make us different from others."

Labsols LIMS – Addons

LAB/LIMS BUSINESS INTELLIGENCE (BI) TOOL

It allows for real-time data capture, analysis and evaluation of laboratory operations. It provide historical, current, and predictive views of business operations

#01

ENVIRONMENTAL MONITORING TOOL

It allows graphical mapping of test results to sample point locations, enabling instant visualization of where problems are occurring

#02

LAB/LIMS CRM TOOL

Manage customer engagement starting from quotation to test information till reporting. Advance real-time information would keep lab active all the time.

#03

LAB/LIMS CUSTOMER PORTAL

Customer can give sample request/view their sample status and update with history at one go. They can view their reports on various parameters.

#04

LAB/LIMS MOBILE APPS

Instant alerts, push notifications, real-time sample results from the lab. Offline connectivity to use the system when in offline mode.

#05

LAB STAFF TRAINING & COMPETENCY TRACKER (STACT) TOOL

It is a comprehensive database for recording the training details for all individuals entered. Able to identify training requirements for each job role.

#06

STATISTICAL PROCESS CONTROL (SPC) TOOL

Graphical display of tabular data, shown as adjacent rectangles. Each rectangle is erected over an interval, with an area equal to the sample of the observations in the interval.

#07

LAB SCHEDULAR TOOL

It can allocate resources, people and equipment depending on job and location throughout. Automatically update a calendar with the forthcoming jobs.

#08

LIMS INTEGRATION WITH ACCOUNTS, BAR-CODING

Direct invoicing to your customers pulling all billing details (cost, discount, vat, tax, etc) from the LIMS automatically resulting saving time and operations cost.

#09

LIMS INTEGRATION WITH DEVICES & INSTRUMENTS

Advanced interfacing to instruments and subsystems. High class interface coded by our in-house programmers to create sync between system and instrument.

#10

LIMS INTEGRATION WITH DOCUMENT MANAGEMENT SYSTEM (DMS)

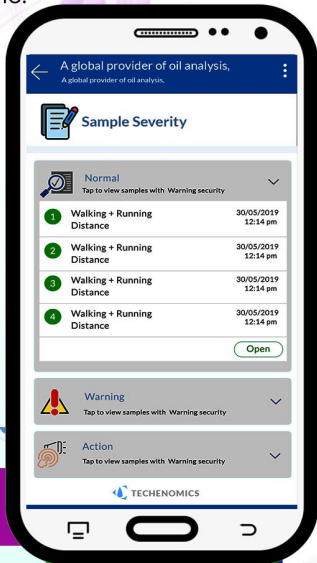

Automates processes like SOPs, audits, Certificates of Analysis (COA), etc and keeps everything in one place managing data and documents generated in your lab.

#11

Labsols LIMS – Services

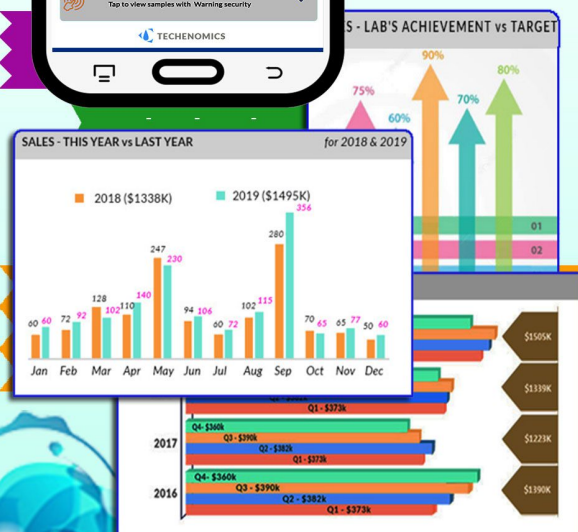

Migration of existing database into new LIMS system

- **End to end system study** – This include through understanding about your current system, current database structure, GAP analysis and prepare strategy.
- **Careful database analysis** – This include the process of defining the data required from each of the existing LIMS tables with the appropriate relationship of the data.
- **Development & Transfer** – This include the stage of development transforming requirements to code. Loading the sample data in both the systems (new and old). We check for any indiscrepancies
- **Established migration strategy** – From small, spreadsheet-based systems to large, legacy LIMS, each migration project is planned, managed, and executed using the most reliable methods and toolsets available.
- **Documentation & Review** – This include the complete documentation of scope to deliverables to organize and code your data migration effectively
- **UAT & Transfer** – Finally if found parallel in both sides, it goes for UAT at client's end. Once you are happy, we migrate the entire data from the old system to the new one.

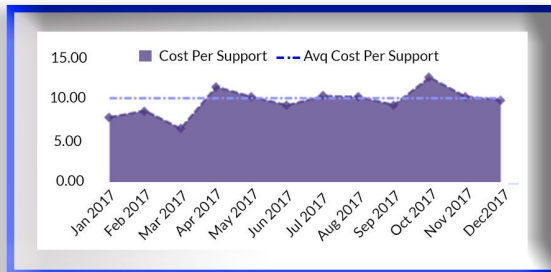

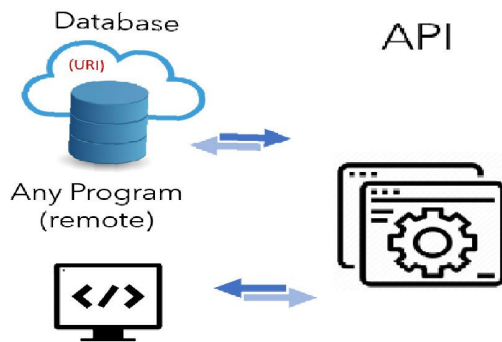

High Level LIMS Document Creation – Onsite/Offsite

- **Lab Process Document for your current operations** – This document will consist of your entire operational flow regards to lab process to give a clear picture of each and every flow that takes place currently.
- **Functional Document** – This document will consist of different functional flow of the modules respect to current system and requirement discussion (samples/reports/workbook/results/certificates/etc)
- **Data Details Document** – This document will consist of key data aspects (Test, Group, Limits, Mapping). Helps in Data-Extract, Migration, Load & etc
- **Solution Specification Document** – This document will consist of identification of gaps in the existing process, new features, application design, performance testing
- **UAT Document** – This document will consist of deployment (user acceptance) and help file
- **Document Delivery** – Any custom document delivery

On Demand **LIMS** Development & Customized Database

• **Proven Experience in BeSpoke Development** – More than 100 be-spoke development projects in testing and inspection domain and still counting

• **It's our people who make the difference** – We are backed by big pool of industry's highly experienced professionals (software developers to business analysts) from different domains capable of delivering any projects

• **Flexible Delivery Model** – We are flexible in terms of delivery model owing to our multi-country presence. We can work in any of three combination – a) Fully Onsite, b) Onsite-Offshore and c) Fully Offshore model.

• **Enterprise Mobile App Development** – Enterprise mobile app developers with global customer base. Worked with various big customers for developing and implementing various bespoke projects for them. Big names include Intertek, BP, TOTAL, Premiere Foods, Sembcorp, Techenomics and more.

• **Risk Mitigation and Regulatory Compliance** – Our entire team works together to ensure that best practice is defined, implemented, and monitored.

Project Management & Deployment of **LIMS** – Cloud/Web/Desktop

• **Deployment Approach** – Our process- and execution-driven approach to LIMS deployments is fundamentally different from the sample-driven approach of traditional LIMS.

• **Implementation** – This entirely new approach to LIMS implementations eliminates the complexities, excessive customization and lengthy associated validation requirements inherent with legacy LIMS—offering fast, “out-of-the-box” deployment capabilities, no custom coding, easy integration into existing software platforms and enterprise-wide data management capabilities.

• **Go-LIVE** – Our capabilities provide the shortest time to “go-live” in the LIMS industry.

• **Quick Rollout & Release** – With only a few IT resources, plus LabSols' implementation team, LIMS applications can be running and validated in only a few weeks to a few months.

LIMS Advantage Training – System Administrator, End User level

• **System Administrator Level** – High Level training for system administrators covering all aspects of configuration user level access, security, data, functions and more

• **End User Level** – High Level training for various user levels (lab manager to technician to management) covering all aspects of their operational layers, modules, access with tutorial document and more.

LIMS Gold Support – Unlimited call, online operational support

• **Services Offered** – > Bug fixing, > Query Clarifications over email/phone, > Enhancements, > Change Requests

• **Quick & Technical Support** – Telephone/Remote support for advice and troubleshooting. Comprehensive technical support process dedicated to addressing technical questions pertaining to system usage and operations

• **Steps & Stages to support** – For any support task logged, it will go through following organised steps/stages before changes are delivered:

1. Understanding of request generated
2. Analysis including risk factor involved
3. Preparation of brief FDD then TDD
4. Application Fixes (Bug, Enhancement & Change Request)
6. Testing in local environment
7. Releasing to Stage, 8. Testing in Stage, 9. Delivery Report, Test Report
