

Looking at the floorplan, the SC positions run in two vertical strips flanking the central seating/booth block — SC1–SC9 on the west corridor (next to the Stage/Pavilion 1 side) and SC10–SC17 on the east corridor (next to Pavilion 2/G6 and the VIP Mining Club & Roundtable Room side). Both strips are essentially the main pedestrian corridors connecting the entrance level to Catering/Pavilions up top, but they're not equal in traffic quality.

My pick: SC13 (with SC12 as a close second)

Why this spot wins over the others:

- **Sits right on the coffee break choke point.** The COFFEE station splits the right strip into SC17–13 (upper) and SC12–10 (lower), with SC13 directly bordering it. Coffee breaks force people to slow down and linger — that's exactly the dwell time a small booth needs to convert a walk-by into a conversation.
- **Feeds off VIP/Roundtable traffic.** SC13–17 sit closest to the VIP Mining Club and Roundtable Room. If your buyers are decision-makers (which the mining-industry framing suggests), this is the highest-value foot traffic on the floor — people moving to/from closed-door sessions, not just casually browsing.
- **Multiple access points converge here,** unlike the west corridor which is fed mainly by one main entrance. The east side has the B5–B8 entrance/exit, an additional entrance near the VIP club, and an escalator at the top near SC17 — meaning attendees pass this strip repeatedly across the day, not just once on arrival.
- **Central, not a dead end.** It's roughly equidistant from Pavilion 2, the Tech Stage overflow, and G6 — so you catch spillover from sessions letting out in either direction, rather than being stuck at the far top or bottom of the strip where traffic thins out.

If SC13 isn't available, SC12 is nearly as strong (same coffee proximity, right at the G6/entrance junction) — and SC4 on the west strip is the equivalent "best of the left side" if you end up placed there instead (coffee-adjacent, near Pavilion 1 and the Tech Stage).

What to avoid: SC1/SC10 (bottom-most, closest to the noisy entrance queue — people aren't in browsing mode yet) and SC9/SC17 (top-most, tucked near Catering where people are focused on food, not vendors).

To actually convert that traffic once you're there:

1. **Design for the corridor, not the booth.** People will see you side-on while walking, not head-on — put your logo/value prop on a banner tall enough to read from 10+ meters down the strip, not just on the table.
2. **Time your push to the coffee rhythm.** Have your best pitch/demo ready to fire the moment the coffee queue forms next door — that's your guaranteed 3–5 minute captive audience window.
3. **Use a fast lead-capture method** (QR code straight to a form or calendar link) since people mid-walk-to-a-session won't stop for a long form.
4. **Coordinate with the Tech Stage/Pavilion 2 schedule** — know when sessions let out, and have staff actively engaging (not sitting) in that 5-minute surge window.
5. **If targeting the VIP crowd specifically**, consider a light touch — a standing staff member who can informally flag down Roundtable/VIP attendees as they pass, since that group often won't stop at a booth unprompted.
